DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-11 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-10 and 18 of copending Application No. 10/577,701. Although the conflicting claims are not identical, they are not patentably distinct from each other because Application '701 is directed to trimerizing ethylene employing a catalyst comprising a tantalum compound and an organic metal compound such as tetraisobutyltin. Claims 1, 4 10 and 18 in Application '701 encompass claims 1, 10 and 11 in the instant application.

Because the limitation 4 moles or less and 2 moles or less as recited in present application may be interpreted to include zero, the silence of Application '701 with regard to water or molecular oxygen being contained in the process is deemed to read upon the claimed limitation in the present application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 6,344,594 to Sen et al. (hereinafter "Sen").

Sen discloses trimerizing ethylene to produce 1-hexene in the presence of a tantalum-based catalyst (col. 1, lines 16-19). The catalyst comprises an effective amount of a tantalum compound such as TaCl₅ and an alkylating component comprising a metal hydrocarbyl compound such as tetramethyltin (col. 1, line 66 to col. 2, line 22).

It is noted that the present claimed invention recites 4 moles or less of water or 2 moles or less of molecular oxygen which may be interpreted to include 0. Absence of water or molecular oxygen in Sen's disclosure is deemed to read upon the claimed limitation with regard to water or molecular oxygen.

Thus, claims 1-11 are deemed to be anticipated by Sen.
